

# Thyroid Cancer in Nebraska: How Molecular Regulators Could Impact Prevention

3rd Annual Cancer Risk and Prevention Symposium  
23<sup>rd</sup> February 2024

**Anupam Kotwal, MD, MSc**  
Assistant Professor of Medicine  
Division of Diabetes, Endocrinology and Metabolism  
Cancer Biology Program, Buffett Cancer Center

1

## Disclosures

None

2

# Learning Objectives

- Appreciate the burden of thyroid cancer
- Identify components of tumor immune microenvironment promoting thyroid carcinogenesis
- Understand the role of novel molecular regulators in thyroid carcinogenesis

3

# Thyroid Cancer Epidemiology

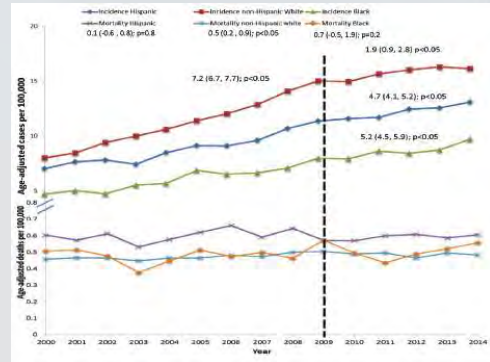

Most common endocrine cancer

Incidence x3 in 30 y → by 2030: 2<sup>nd</sup> in F

<https://seer.cancer.gov/statistics-network/explorer/application>

Kotwal A, Brito JP. Endo Pract 2019

Nebraska: Incidence in females per 100,000 higher than national average

Watanabe-Galloway S, Ratnapradipa KL, Li L, Robinson T, Rohde J, Luma LL, Carritt N, Zhang X, Liu Y, Wang X, Napit K, Ranta, J. Cancer Burden in Nebraska (2022). University of Nebraska Medical Center.

4

# Thyroid Cancer Subtypes

Created with BioRender.com

5

# Why Prevent and Control Thyroid Cancer?

Poor QOL on par with more aggressive cancers

Lymph node met 60%; distant met 40%

- Multiple mets → 5 y survival 15%
- Refractory to conventional treatment → 10 y survival 10%

Financial Burden to patients, society

- Bankruptcy rate 9/1000 person-years >other cancers; 4.4-fold than controls

Adverse effects of each treatment

Kotwal A, Thompson G, DeVita Cancer: Principles and Practice of Oncology 2022  
 Haugen B et al. Thyroid. 2016

 Amin MB et al, Springer. 2017

6

# Risk Factors for Thyroid Cancer

## Ionizing radiation exposure

- 2-5 G; 2-3 decades after exposure
- 40% of nodules malignant

## Family history in 1<sup>st</sup> degree relative (>2)

- 5-9 x increase

## Familial adenomatous polyposis

## ? Thyroid autoimmunity or immune-dysregulation

- ? Elevated TSH; increased risk but better prognosis?

## ? Environmental exposures

# Investigating other Risk Factors for Thyroid Cancer

Whitney Goldner, MD

Variables associated with late stage (III/IV) presentation of thyroid cancer	Adjusted OR (95% CI)	P value
Urban		
Rural	1.6 (1.04-2.4)	0.032
Sex		
Male	Reference	
Female	0.53 (0.34-0.8)	0.005
Age at Diagnosis		
65-95 years	Reference	
45-64 years	0.56 (0.35-0.89)	0.014

Diagnosis at advanced cancer stage in rural areas of Nebraska

Agricultural exposures link with Thyroid cancer in Nebraska?

Jesse Bell, PhD

Siddhi Munde, MS

9

# Immunoediting in Carcinogenesis

10

# What we know about Immunoediting in Thyroid Cancer

Lower mutation burden than others but high T-cell infiltration (French J et al. Lancet Diab Endocrinol 2016)

Thyroid Cancer link with Autoimmunity & Female sex

- Humans: Increased cancer risk (Mleod et al. J Clin Oncol. 2022) but unclear carcinogenesis or prognosis
- Mice: Less aggressive cancer in preexisting thyroid inflammation (Pani et al. Endocrinol. 2021)

PD-L1 expression higher in *BRAFV600E* mutant thyroid cancer

Role of immune cells in pathological aggressiveness

- Regulatory (FOXP3+), PD1+ T cells (French J et al. J Clin Endocrinol Metab 2012)
- M2 macrophages (Ryder M et al. Endocr Relat Cancer 2008; Jung KY et al. J Pathol Transl Med 2015)
- NK cells conflicting evidence (Gogali F et al. Thyroid 2013)
- MDSCs (Angell T et al. Thyroid 2016, Cunha LL et al. Clin Endocrinol (Oxf) 2013)

# What about Thyroid Autoimmunity before Thyroid Cancer?

PJ Loucks

92 non-metastatic DTC adults undergoing surgical treatment with available preoperative sera

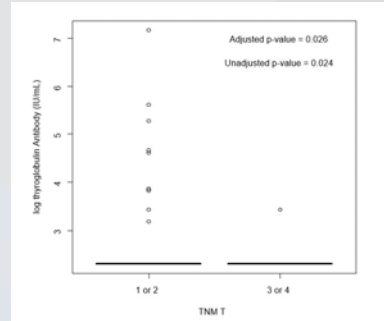

**Higher TgAb level** associated with

- **lower T stage** after adjusting for age, sex (p=0.03)
- **less tumor size** (p=0.04)
- **lower lymph node ratio** (p=0.01)

Percentage distribution of TNM Stage

Circulating thyroid Ab	N elevated/N available (%)
TgAb >20 IU/mL	10/98 (10.20%)
TPOAb >0.3 IU/mL	34/47 (72.34%)

Log-transformed TgAb compared between TNM T categories 1+2 v/s 3+4

# Circulating Immune Phenotypes in Advanced Thyroid Cancer

<u>More Suppressor Cells</u>	<u>Less Effector Cells</u>	<u>Altered Memory T cells</u>	<u>Less circulating Anti-thyroid Ab</u>

# EHD1 & RLN2 expression in Thyroid Cancer TMA

## Case-control study of adult humans

181 differentiated thyroid cancer (DTC)  
185 benign thyroid

**Tissue microarrays**  
2 cores of 2 mm per specimen  
Placenta control

**Antibody staining**  
RLN2 or EHD1  
CD68 (total macrophages)  
CD163 (M2 macrophages)  
DAPI (nucleus)

**Analysis**  
Pixels/area experimental slide – isotype-matched IgG slide  
Mean pixels/area or EHD1 histoscore (staining intensity x % cells stained) compared by t-test assuming unequal variances

25

Thyroid Cancer Translational Poster

## EPS15 HOMOLOGY DOMAIN 1 PROTEIN: A NOVEL BIOMARKER FOR DIFFERENTIATED THYROID CANCER

Anupam Kotwal\*, Bhopal Mohapatra, Sukanya Chakraborty, Maddie Fitch, Matthew Storck, Nicholas Whiteman, Joshua Nguyen, Cheng Zheng, Ana Yuil-Valdes, Benjamin Swanson, Oleg Shats, Robert Bennett, Hamid Band, Whitney Goldner

Bhopal Mohapatra, PhD

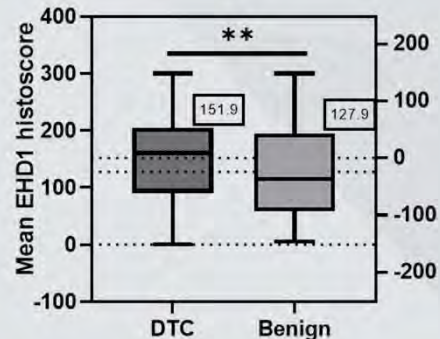

Cases (n=181) vs Controls (n=185)

### Higher EHD1 histoscore

- Difference of means 23.8 (95% CI 7.3 to 40.3; p=0.005)
- Persisted after adjusting for age and sex  
Difference of means 24 (95% CI 10.8 to 44.5; p=0.001)

Not associated with

Sex, age  
AJCC stage, lymph node status or ATA risk category (limited sample)

Comparison between cases (DTC without distant metastases) and controls (benign thyroid) in terms of EHD1 histoscore. \*\*p<0.01

26

Abstract citation ID: bvad114.1996

**Relaxin: A Novel Marker for Pro-Tumoral Thyroid Cancer Microenvironment?**

Anupam Kotwal, MD, Robert G. Bennett, Benjamin Swanson, Whitney Goldner, Ana Yuil-Valdes, Nicholas Whiteman, and Oleg Shats

University of Nebraska Medical Center, Omaha, NE, USA

Cases (n=181) vs Controls (n=185)

- **Higher RLN2, CD68 (macrophage) and CD163 (M2 macrophage) p<0.0001**
- Not associated with sex, age, AJCC stage, lymph node status or ATA risk category (limited sample)

Nicholas Whiteman, BS

Comparison between cases (DTC without distant metastases) and controls (benign thyroid) in terms of RLN2 (A), CD68 (B) and CD163 (C) expression in pixels/area. \*\*\*\*p<0.0001.

Immunofluorescence image of experimental DTC core (A) and non-cancerous thyroid (B) illustrating expression of RLN2, CD68, CD163, and DAPI (nucleus).

**Thyroid cell lines**

Created with BioRender.com

Cell Line	Type	Sex	Mutation (s)	Thyroid-specific genes
N-Thy	Noncancer	F	None	None
BCPAP	Papillary	F	BRAF-V600E RET/PTC1 p53	High PAX8 and TTF1
KTC-1	Papillary	M	BRAF-V599E	High PAX8 and TTF1
TPC-1	Papillary	F	RET/PTC1 HRAS	High PAX8 but absent TTF1
FTC133	Follicular	M		Low PAX8 but high TTF1
Hth7	Anaplastic	F	BRAF-WT	Low PAX8 and TTF1
C643	Anaplastic	M	BRAF-WT HRAS-G13R RAF1	Low PAX8 and TTF1

# EHD1 & RLN2 expression in Thyroid Cancer cell lines – preliminary

Compare by oncogenic drivers

- immortalized cells lose differentiation

Transwell migration assay; co-culture immune cells

EHD1 KO to study impact on RLN2 and vice versa → impact on cell characteristics

29

# Interplay between EHD1 & Relaxin via NF-κB: Impact on Cancer Risk and Prevention?

Druggable ATPase RTKs driven by BRAF mutation

Timing in carcinogenesis Modulation for prevention Prognostic significance

Downregulate suppressors (M2, Treg, MDSC) Upregulate effectors (CD8, NK, gamma-delta)

Burston HE et al, The Journal of Clinical Investigation. 2021  
Wang C et al, Thorac Cancer. 2023

30

# Conclusions and Future Directions: Thyroid Cancer Risk & Prevention

- ❖ Interface of molecular regulators with immunoeediting
- ❖ Influence of environmental exposures
  - ❖ Early diagnosis and risk prediction
  - ❖ Targeted strategies before cancer spread
  - ❖ Translation to other malignancies

31
