

Module 3: Oral Effects of Common Medications Prescribed for Long Term Care Residents

Course Objectives:

1. Direct care providers will be able to identify most prescribed/common medications used by long term care residents.
2. Direct care providers will be able to discuss the common oral side effects of medications.
3. Direct care providers will be able to identify oral symptoms/side effects in residents and bring it to the attention of the charge nurse and/or dentist.
4. After consultation with charge nurse or dentist, direct care providers will help residents apply/use products designed to alleviate or manage side effects.
