AND SAFETY

HAZARDOUS MATERIAL FACT SHEET

Empty Chemical Container Disposal

Empty chemical containers may be regulated by the EPA and UNMC personnel may be exposed when handling them, therefore, it is important to follow this fact sheet when disposing of empty chemical containers.

By EPA definition, containers are considered empty when all chemicals have been removed using the practices commonly employed to remove materials from that type of container (e.g., pouring, pumping, dumping) and no more than 3% by weight of the total capacity of the container remains in the container. Please empty all containers to the best of your ability. If you cannot empty a container, please tag the container with a green chemical collection tag and contact the Environmental Health and Safety Office (EHS) for proper disposal. See Hazardous Material Fact Sheet, [Chemical Disposal](#).

****Certain chemical containers, even when empty, must be tagged for disposal. See section below for EPA P-listed chemicals.****

Guidelines for disposal of empty chemical containers (glass, plastic, or metal)

When empty, chemical containers should be re-used, recycled or disposed of in one of the following manners:

Re-used: Empty chemical containers can be repurposed to collect your “used” (waste) chemicals. Be sure the used chemicals you want to add to the empty containers are compatible with the previous contents and the container. (For example, place used methanol in empty methanol containers.) Make sure original labels are defaced and re-label the container with the appropriate identifier.

Recycled: Empty **plastic** and **aluminum** (no glass) chemical containers may be recycled if you can safely rinse the inside and outside of the containers with water. The rinsate can be disposed of in the sanitary sewer (sink). Let the containers dry, deface the labels, remove the lids, and place them in the green (plastics and metals) recycling containers which are located in the common areas on most floors or place in a designated container in the lab and clearly label them for recycling (i.e. “Plastic/Aluminum recycling”). For information on recycling of items within the lab, please visit the LiveGreen website: <http://livegreennebraska.com/recycling/>

Disposed: All empty **glass** containers and those **plastic** or **metal** containers that can be safely rinsed with water can be discarded with the general trash. If discarding these items with general trash, please protect the safety of the Environmental Services (EVS) staff by safely rinsing the inside and outside of the containers with water. Also, make sure the containers are tightly closed, deface the labels, clearly mark them for disposal, and place them in garbage containers. Do not set empty containers in hallways, common trash areas, or on loading docks. Empty containers should be kept within your laboratory space, until EVS picks them up to discard them with the general trash.

General Trash Guidelines and Examples:

- Remove chemical residue.
- Deface chemical name.
- Deface hazard symbols.
- Label container as EMPTY.

Exceptions to the disposal methods listed above apply to P-listed chemicals, peroxide-forming chemicals, pesticides, and aerosol cans:

P-listed chemicals: Chemicals listed on the P-list (see attached) are acutely toxic. Therefore, even the residue in the empty containers of P-listed chemicals is considered hazardous. These empty chemical containers must be tagged with green chemical collection tags and be given to Environmental Health and Safety for proper disposal.

Peroxide-forming chemicals: These chemicals are dangerous because they can form explosive peroxides. If you find any of these old containers, whether empty or full, please contact EHS for immediate removal. Empty containers from your everyday use of these chemicals (e.g. glass bottles, vials, etc.) should be triple-rinsed with water. The rinsate can be disposed of in the sanitary sewer provided that only residues remained in the container prior to triple-rinsing. Once triple-rinsed, the labels should be defaced and the containers allowed to dry prior to disposal in the garbage.

Pesticides: Pesticides are regulated by the EPA through the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA). This Act calls for all empty pesticide containers to be triple-rinsed using water or the solvent specified on the label, and the rinsate reused. Once the containers have been triple-rinsed, the labels should be defaced and thrown in the garbage. Check label directions for any additional requirements.

Aerosol cans: Aerosol cans are pressurized, even when empty, so please tag all aerosol cans and contact EHS for disposal. See Hazardous Material Fact Sheet, [Aerosol Can Disposal](#).
