

# Introduction to Research Data Management Lifecycle

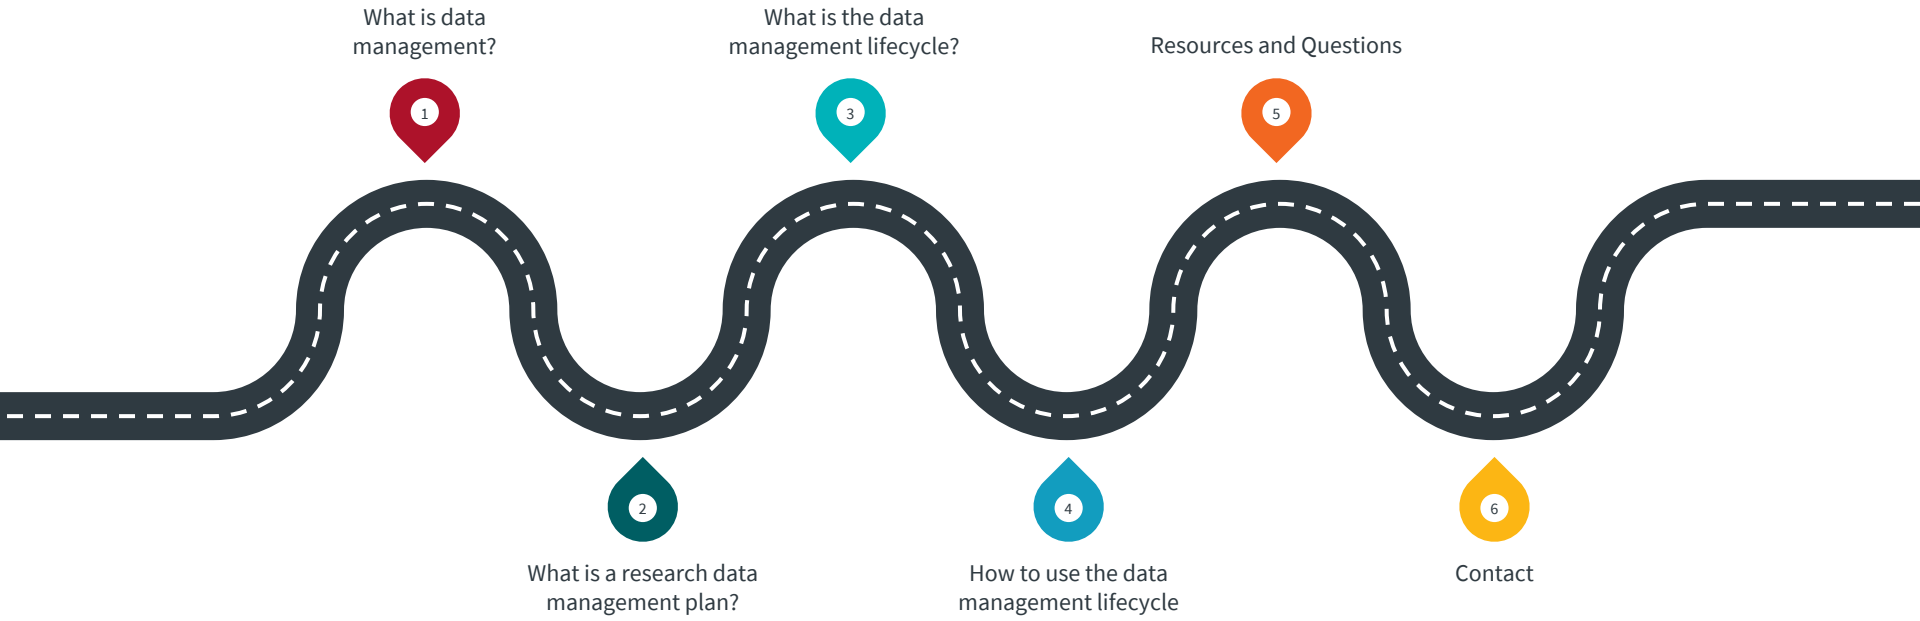

**Lisa Chinn, PhD, MLIS**

Data Services Librarian

Leon S. McGoogan Health Sciences Library

April 9, 2024

# Session Outline

# Objectives

By the end of this session, you will be able to:

1. Understand the purpose of the research data management lifecycle
2. Identify the benefits of using the research data management lifecycle
3. Use the research data management lifecycle for your research

# What is data management?

# What is data management?

# FAIR

- Findability
- Accessibility
- Interoperability
- Reusability

(FAIR) serves to guide data producers and publishers as they navigate around these obstacles, thereby helping to maximize the added-value gained by contemporary, formal scholarly digital publishing

# FAIR

**Findable** – data should be possible for others to discover your data; metadata should be available online, and all data should have a persistent identifier (example: DOI)

**Accessible** – humans and computers should be able to gain access to your data (when appropriate); metadata can be accessible if the data cannot be

**Interoperable** – data and metadata should conform to recognized formats and standards to allow them to be exchanged

**Reusable** – Include documentation to support interpretation and reuse. License so others know what kinds of reuse are permitted

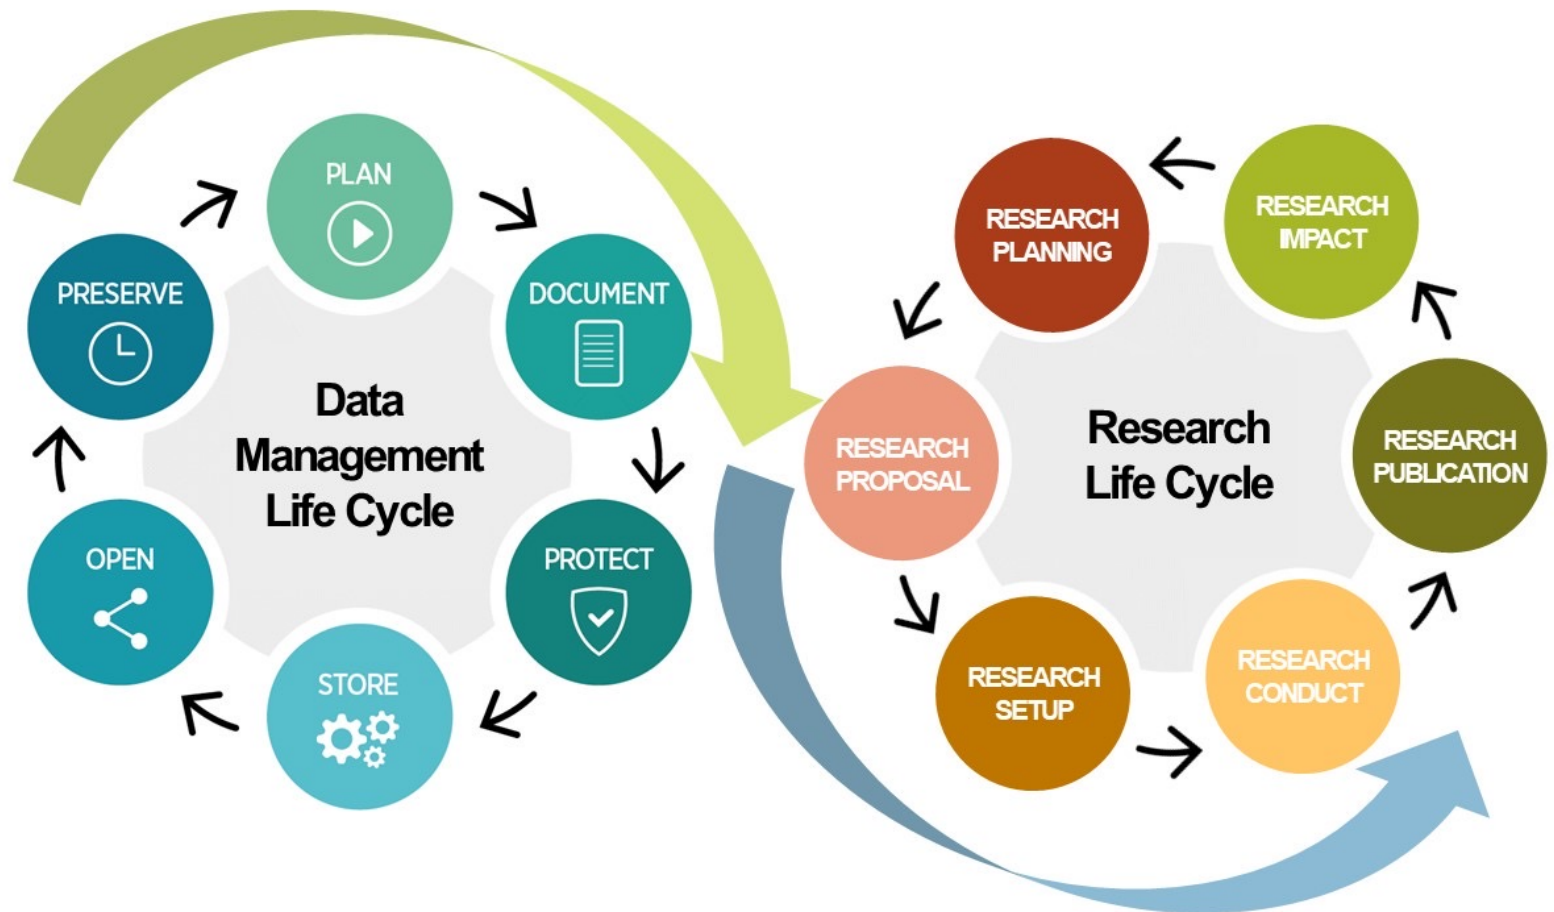

# Research Data Management Plan

Data management plan (DMP) is a document that describes **how you will treat your data** during a project and **what happens after the project ends**

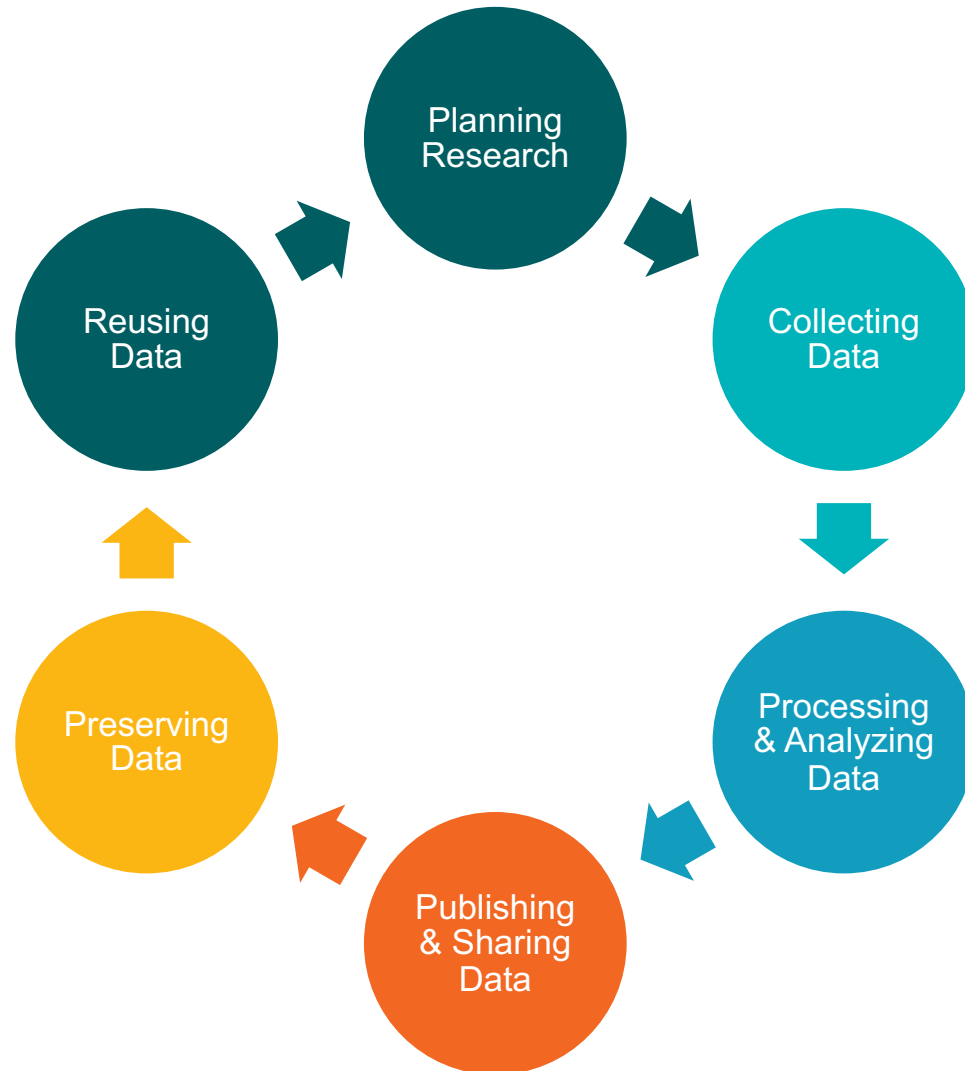

Typically covers all or portions of the **data lifecycle**

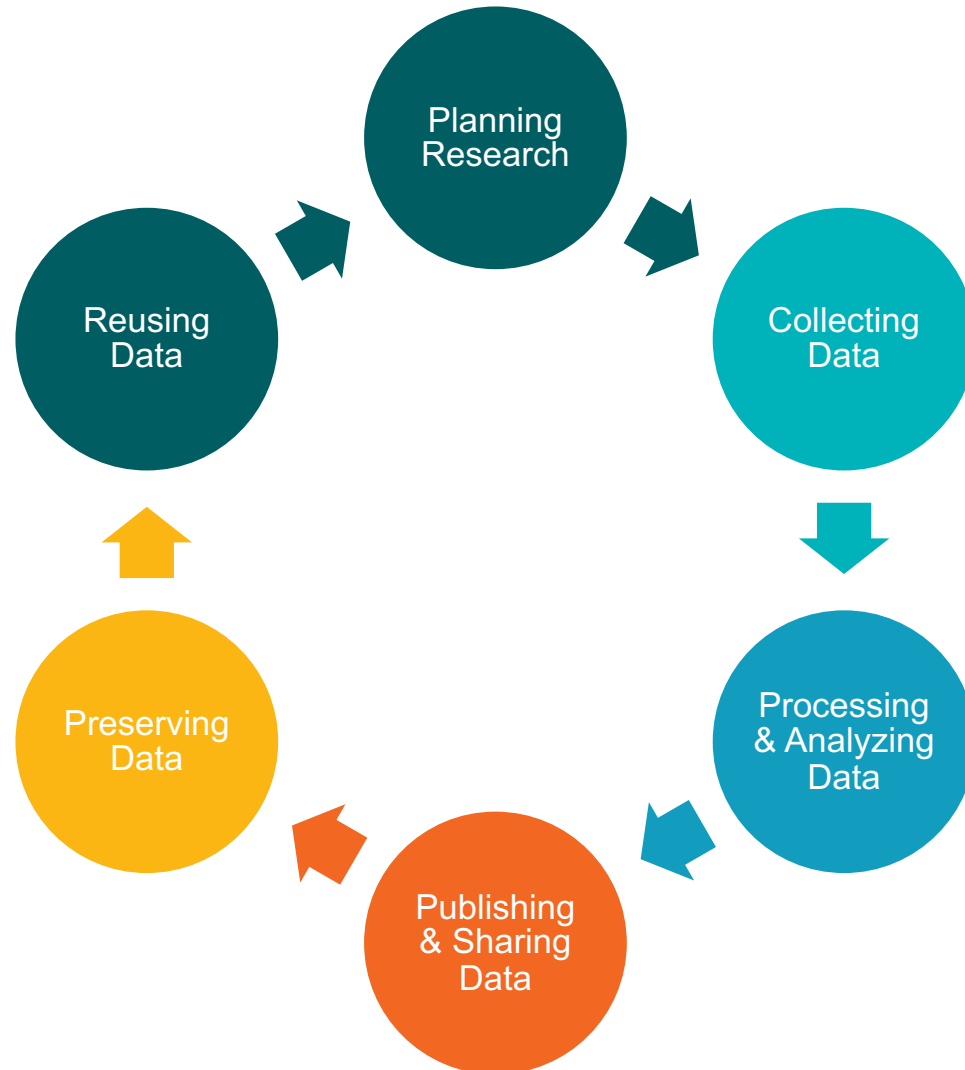

# Research Data Management Plan

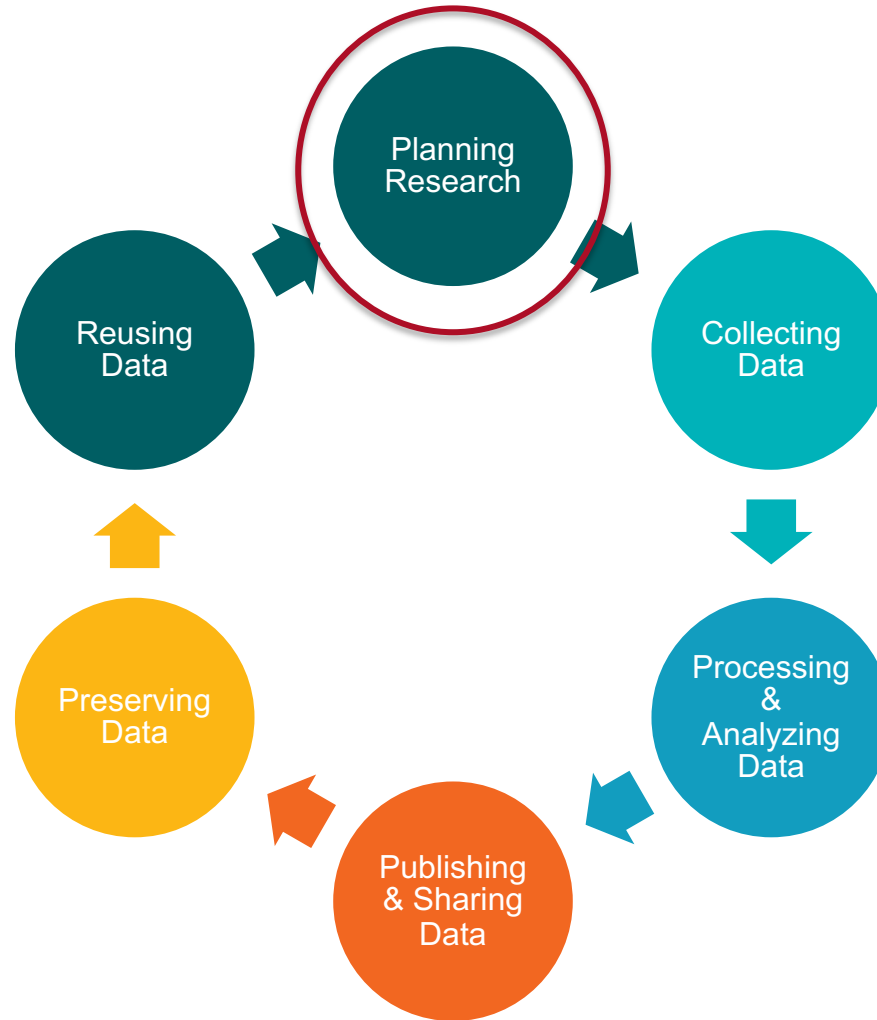

# The Research Data Management Lifecycle

# Where does the **Creation** of a Data Management Plan fall in the Data Management Lifecycle?

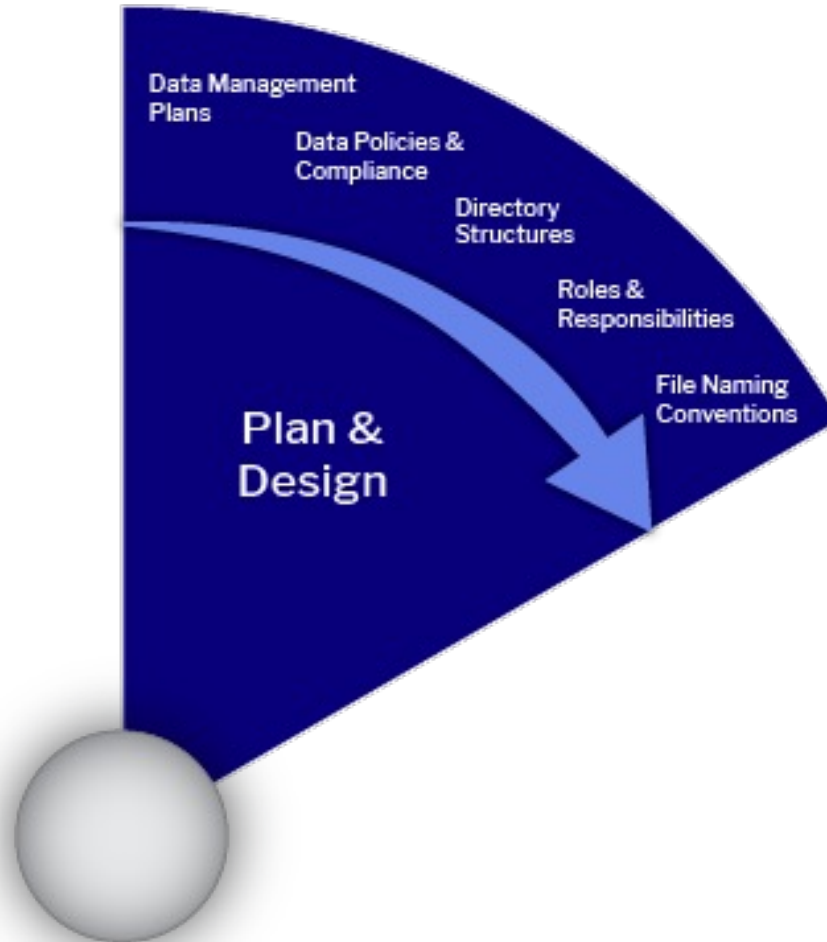

# Where does the **Creation** of a Data Management Plan fall in the Data Management Lifecycle?

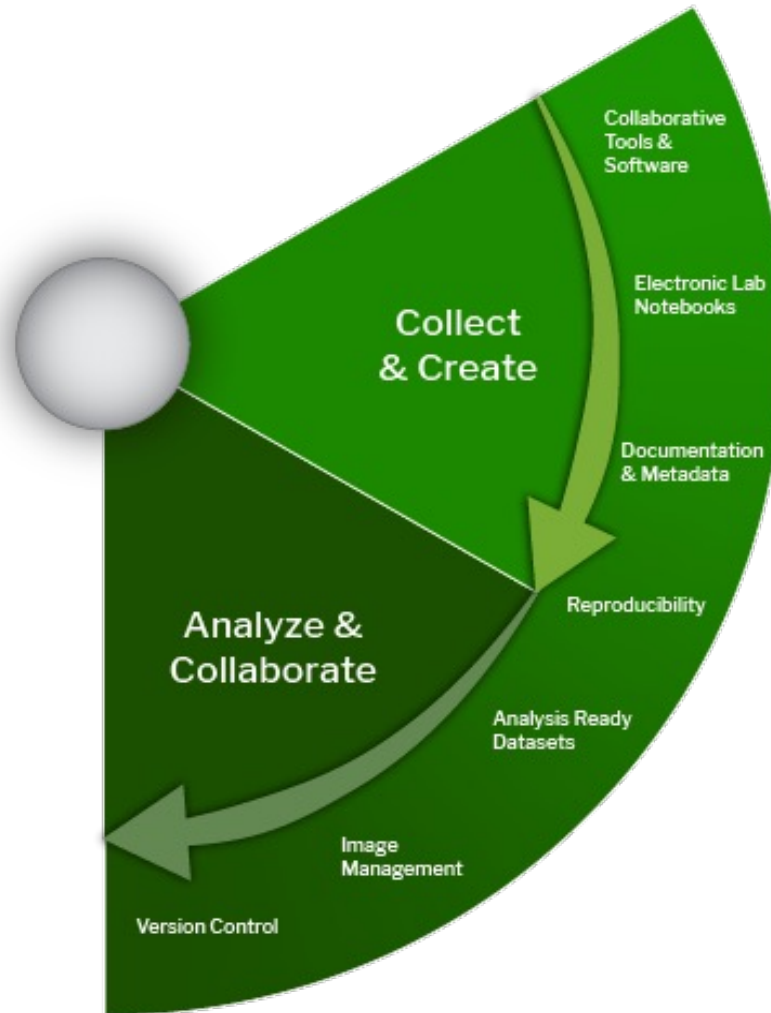

# Research Data Management Checklist

# Planning Research

# Collecting and Creating

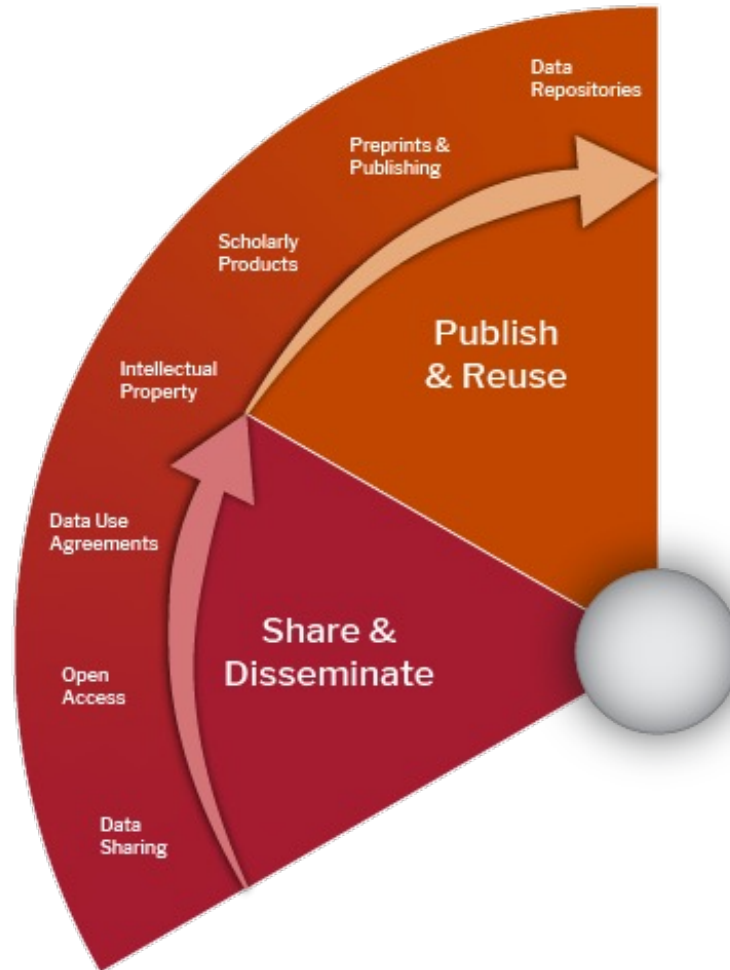

# Evaluate and Archive

# Share and Reuse

# Research Data Management Lifecycle

# Other Best Practices

- Organizing Data
  - File Structure & Naming Conventions
  - Be Consistent
  - Be Descriptive
- Create a unique & persistent identifier (DOIs, ORCID, etc.)
- Data sensitivity

## My Dashboard

The table below lists the plans that you have created, and that have been shared with you by others. You can edit, share, download, make a copy, or remove these plans at any time.

Project Title	Template	Edited	Role	Test	Visibility	Shared	
Test NIH Plan	Digital Curation Centre	03-31-2022	Owner	<input checked="" type="checkbox"/>	N/A	No	<a href="#">Actions</a>
Test	IMLS Digital Product Form (Data Management Plan)	11-03-2020	Owner	<input type="checkbox"/>	Private	No	<a href="#">Actions</a>

## Additional Resources

- [Article: Ten Simple Rules to Creating a Data Management Plan](#)

# Copyright & Citation

If you're using data collected and published by others, it's important to cite to ensure that the proper credit is given to the original researcher, and so that readers can locate the original dataset

Review your citation style (APA, AMA, etc.) manual on how to cite/acknowledge datasets in a paper.
